PROFESSIONAL SUMMARY

Junior Full-Stack Developer building production-style web applications with TypeScript, React, Next.js, Node.js, and PostgreSQL. Developed a tested job aggregation platform that consolidates 244 listings from 73 companies across 8 sources and includes authentication, search, caching, scheduled scraping, and Dockerized services. Hands-on experience debugging cross-service failures and designing clear boundaries between SQL, ORM, caching, and application layers.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, HTML, CSS
Frontend: React, Next.js, Tailwind CSS, responsive design, accessibility
Backend: Node.js, Express.js, REST APIs, JWT, bcrypt
Data & Infrastructure: PostgreSQL, Prisma ORM, raw SQL, Redis, Docker, Docker Compose
Testing & Automation: Vitest, unit testing, integration testing, Puppeteer, Cheerio, node-cron
Tools: Git, GitHub, npm, ESLint

PROJECTS

Job Scraper Platform | *Independent Full-Stack Project* | Dec 2025 - Jul 2026 | GitHub

Technologies: *Next.js, React, TypeScript, Node.js, Express, PostgreSQL, Prisma, Redis, Docker, Puppeteer, Cheerio, Vitest*

- Engineered an end-to-end job aggregation platform that consolidates 244 listings from 73 companies across 8 sources, with keyword search, filters, sorting, pagination, saved jobs, and admin statistics.
- Developed a TypeScript REST API with Express and PostgreSQL; applied raw SQL to search and analytics, Prisma to CRUD workflows, and composite keys to semantic deduplication.
- Automated scheduled scraping with Puppeteer, Cheerio, and node-cron, then introduced Redis caching with 5-30 minute TTLs and write-path invalidation to balance response speed and data freshness.
- Containerized the Next.js frontend, API, PostgreSQL, and Redis with Docker Compose and built 124 unit and integration tests across authentication, jobs, saved jobs, admin, and health endpoints.
- Diagnosed a misleading EAI_AGAIN failure by tracing the scraper execution path to an incomplete dependency container; unified scraper and API initialization and added regression coverage.

Developer Portfolio | *Independent Frontend Project* | Jul 2026 - Present | GitHub

Technologies: *Next.js, React, TypeScript, CSS, responsive design, accessibility*

- Built a responsive, recruiter-focused portfolio that presents the Job Scraper as a technical case study with concise evidence and direct access to source code.
- Structured the site with reusable React components and typed content modules, adding accessible navigation, reduced-motion support, and layouts optimized for desktop and mobile.
